

Philippe Trens received his Ph.D. degree in materials sciences from the Université of Provence, "Centre de Thermodynamique et Calorimétrie du CNRS" Marseilles, France, in 1994. After a three-year postdoctoral fellowship at the University of Reading (UK) in the group of Dr. M. J. Hudson, he became a Lecturer in 1999 at the National Graduate School of Chemistry of Montpellier, France. He received a Habilitation degree in 2005. He was promoted as Professor in 2006, in the Advanced Materials for Catalysis and Health group at the Institut Charles Gerhardt, Montpellier. His research focuses on the adsorption properties of porous materials such as mineral oxides or more recently, metal organic frameworks. His work includes the development and applications of advanced experimental techniques related to thermodynamics at interfaces. He is the author of more than 100 peer-reviewed papers.
