

Andreja Bencan Golob (f) obtained her Ph.D. in 2002 in the field of Materials, from the Faculty of Chemistry and Chemical Technology, University of Ljubljana, Slovenia. She is a senior researcher at the Electronic Ceramics Department of the Jožef Stefan Institute, Ljubljana and an Assistant Professor at the Jožef Stefan International Postgraduate School. Her main research interest is the synthesis and characterisation of lead-based and lead-free piezoelectric materials in single crystal, bulk or thick film form. In the last 7 years she is involved in the development of bismuth ferrite (with emphasis on microstructure investigations by scanning and transmission electron microscopy methods) and its integration into thick-film structures. She is the author or co-author of 85 scientific papers, 5 review papers and 5 chapters in monographs.
